INTRODUCING **THE CLASSROOM GUARDIAN**

If you are ever faced with a lock down or an active shooter scenario in your school, security experts as well as the ALICE Training Institute, are recommending you provide your teachers with a quick and easy method of barricading their classroom doors. The Classroom Guardian is the strong, lightweight, instantaneous, and universal solution that can do just that.

BENEFITS OF THE CLASSROOM GUARDIAN

The Classroom Guardian is an affordable and universal device that will effectively barricade your classrooms in the event of an emergency.

Implements in Seconds

The Classroom Guardian is pre-adjusted to fit any door during installation so all your teacher has to do is insert the device in place during a lock down. It does not require the manual insertion of any cotter pins or any type of hardware devices since it locks into place automatically via our industry unique spring loaded locking device.

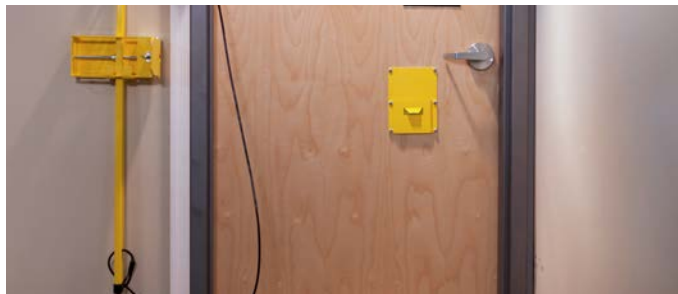

Lightweight and Strong

The Classroom Guardian is constructed using slotted steel uni-strut which provides superior strength, yet makes it light enough for even your smallest teacher to handle.

Ease of Installation

The Classroom Guardian is mounted using only 6 screws and can be installed anywhere on your door ensuring American Disabilities Act compliant height. Other devices on the market have static installation requirements such as floor level or at a position too high to reach for a wheelchair-bound student. Certain devices on the market also require drilling a large hole in your floor which can potentially disturb asbestos, depending on when your school was built. Without proper maintenance, these same holes can quickly fill up with debris, rendering them useless during a time of emergency.

The Classroom Guardian can be mounted anywhere within the American's with Disabilities Act compliant height range. It can be securely disengaged from the hallway by first responders or administrators to comply with existing fire codes via a proprietary tamper proof device.

Optional Cable Locking Kit

The Cable Locking Kit is used to prevent the Classroom Guardian door barriers from leaving the classroom. The cable unit attaches to the device and secures to the door jamb. Each kit comes with a 6' security cable, security plate that is mounted on the door jamb, super glue and a keyed padlock.
